Fix the **Available in Stock** toggle button in the "Add New Product" form of the FlashDrop app.

Currently, the green button does not look or behave like a proper ON/OFF switch. Redesign and implement it as a fully functional toggle switch.

1. Toggle Button Design

- Create a proper Android-style ON/OFF switch.
- When ON:
    - Background/track colour: FlashDrop Green (#087443).
    - White circular thumb positioned on the RIGHT.
    - Product is marked as Available in Stock.
    - Display text: "Customers can order this product."
- When OFF:
    - Background/track colour: Light Grey (#BDBDBD).
    - White circular thumb positioned on the LEFT.
    - Product is marked as Out of Stock.
    - Display text: "Customers cannot order this product."

2. Toggle Functionality

- The entire switch must be clickable.
- Tapping ON must immediately change it to OFF.
- Tapping OFF must immediately change it to ON.
- Add a smooth animation when switching between ON and OFF.
- Prevent accidental clicks or unresponsive behaviour.
- Make sure the switch works properly on Android mobile screens.

3. Save Product Status

- When the shopkeeper clicks "Save Product", save the selected ON/OFF status with the product.
- If the shopkeeper edits the product later, show its previously saved status.
- Do not automatically reset the toggle when reopening the form.
- Preserve the status even after closing and reopening the app.

4. Customer App Integration

- ON: Display the product normally and allow customers to add it to their cart.
- OFF: Display an "Out of Stock" label on the product.
- Disable the Add to Cart button for unavailable products.
- Prevent customers from ordering an out-of-stock product, even through an old cart entry.

5. Data Persistence

- Store the availability status permanently in the product database.
- For the current demo version, use persistent local storage.
- Ensure that the saved status remains consistent across the shopkeeper's product list, product details, customer app and checkout.

6. Important Instructions

- Do not change the existing FlashDrop UI layout, product form, colours, fonts or other functionality.
- Keep the existing Save Product and Cancel buttons unchanged.
- Only fix and improve the Available in Stock toggle and its functionality.
- Do not use a decorative green button in place of a functional switch.

Expected Result: A professional, responsive and fully working ON/OFF toggle switch that correctly controls product availability throughout the FlashDrop application.
